

Electromagnetic Tools for Imaging Fluids Underground

Rob. L. Evans

Department of Geology and Geophysics, Woods Hole Oceanographic
Institution

How do we measure conductivity?

- Magnetotellurics
- Controlled Source EM

MT instruments

Shallow Imaging: CSEM

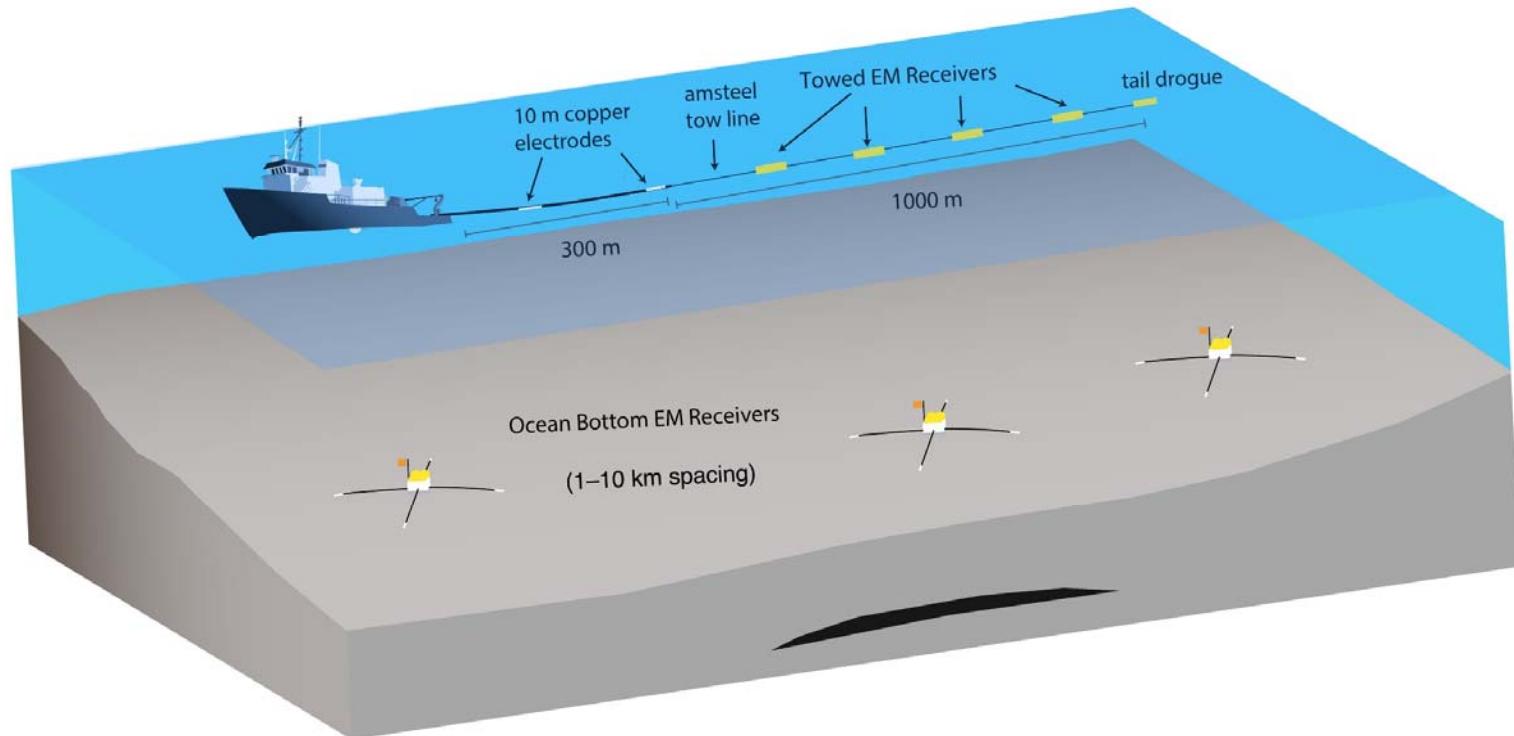

Nearshore Work: CSEM

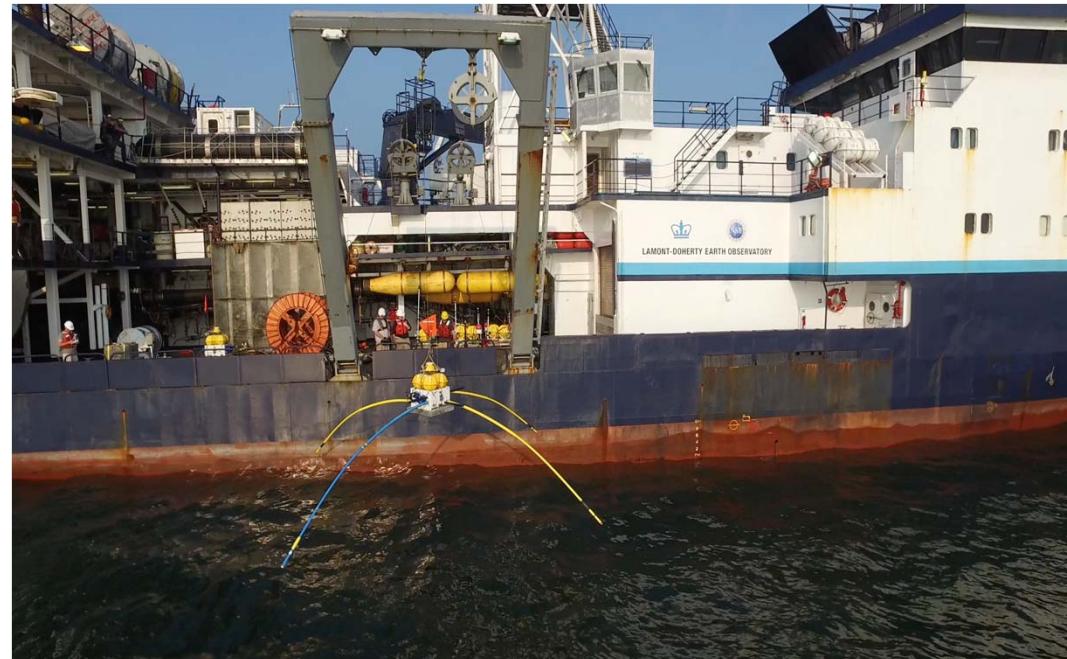

Mulligan et al., (2007)

Controlled Source EM Method

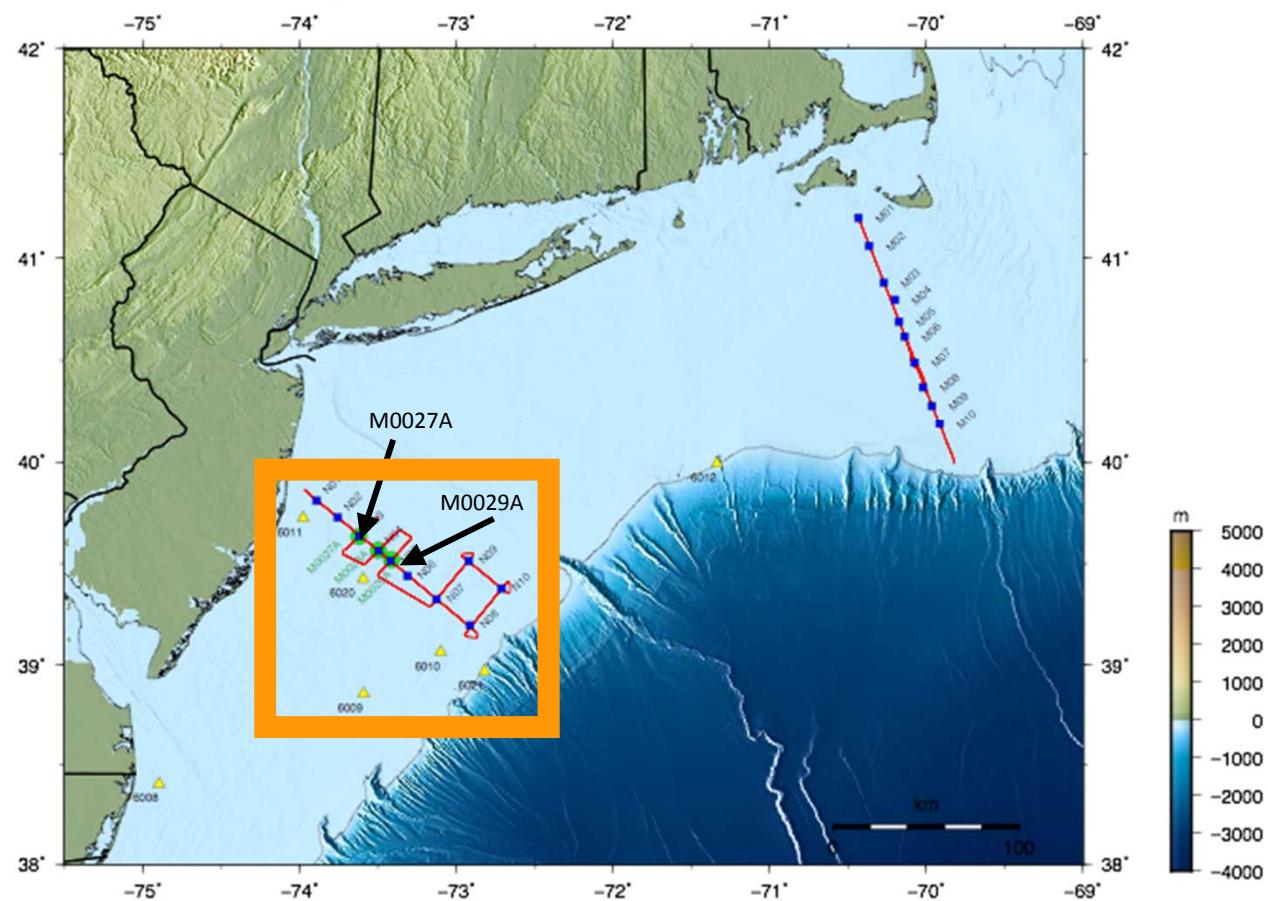

receivers

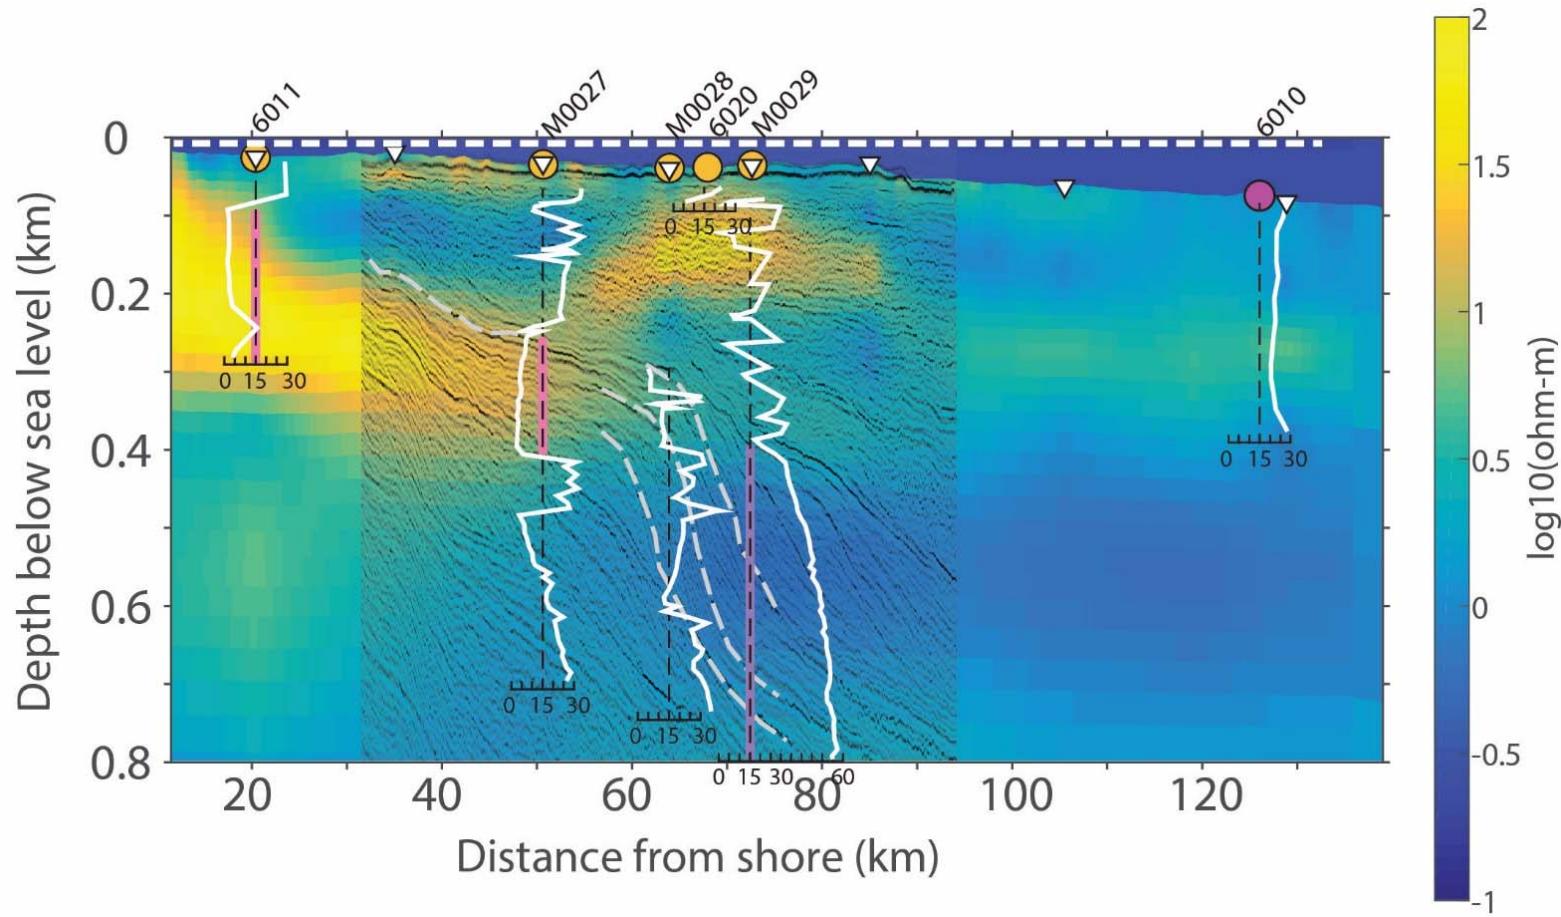

East Coast Survey: New Jersey

- Towed CSEM
- MT Sites
- IODP Sites
- ▲ AMCOR Sites

New Jersey

A New System

In Collaboration with Alan Chave (WHOI)

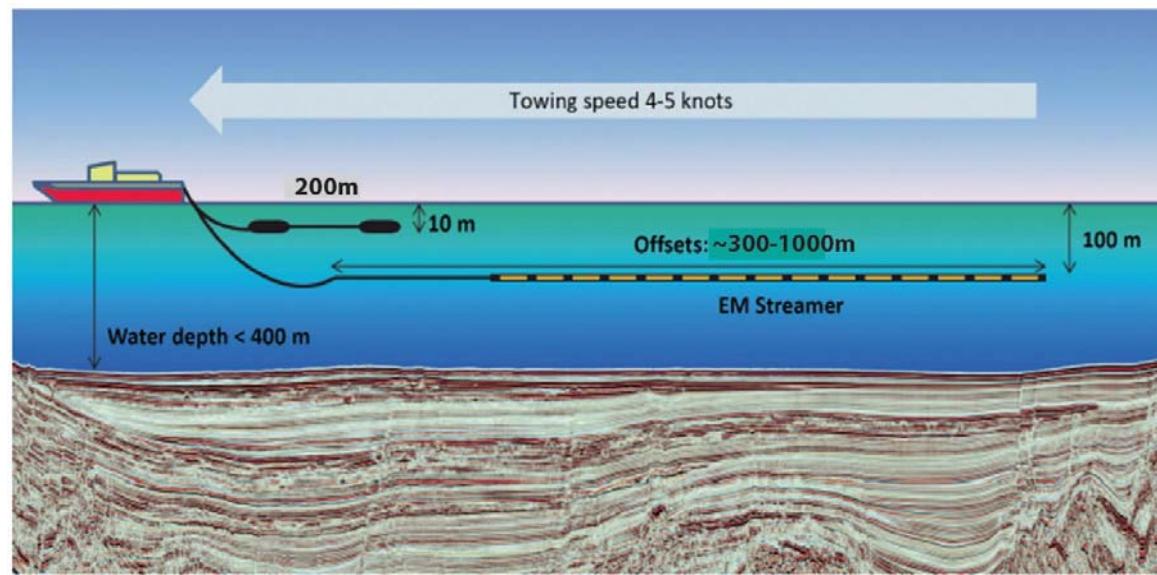

New Towed Streamer System

More receivers (5-10)

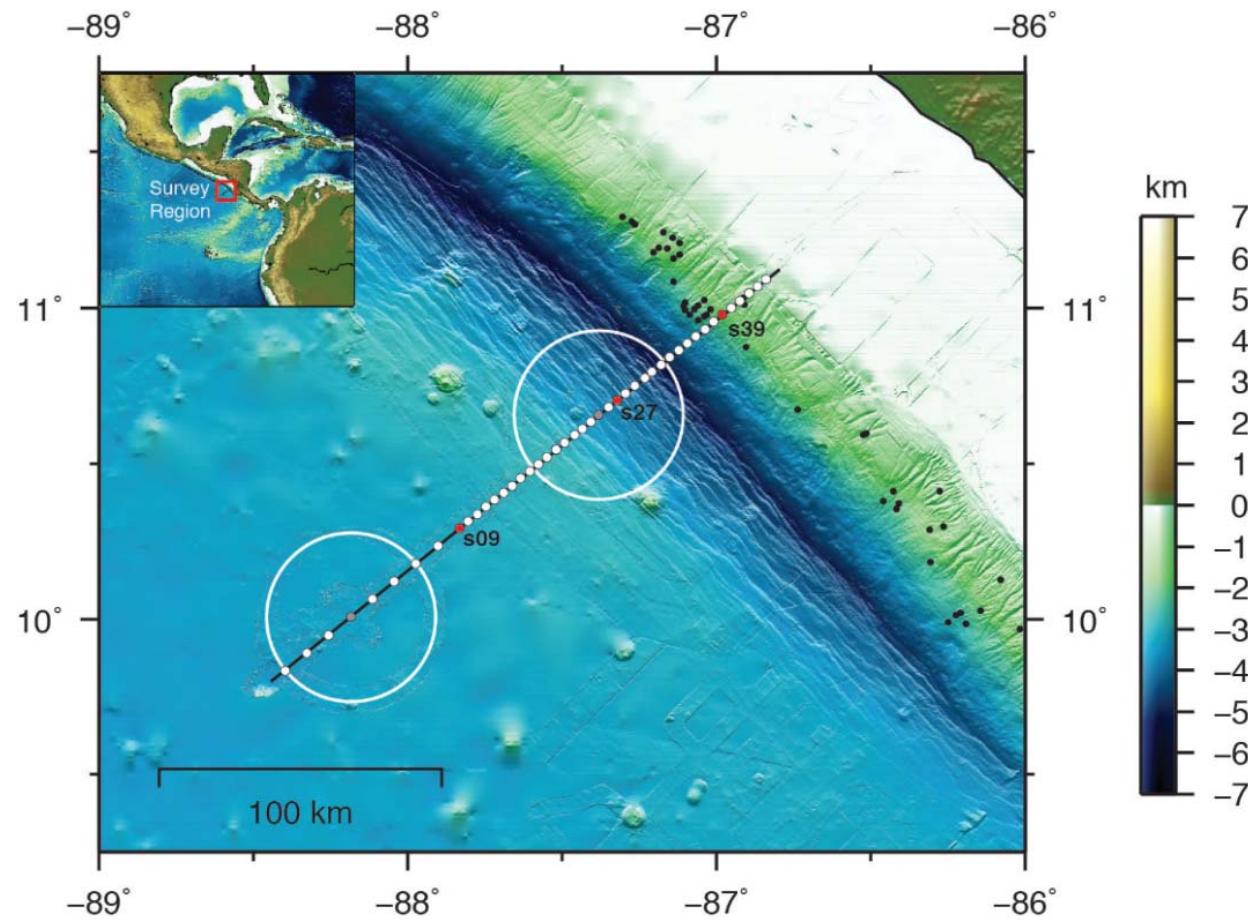

Large source dipole (~200A)

Receiver array towed in mid-water column

Real time data retrieval and analysis on board ship

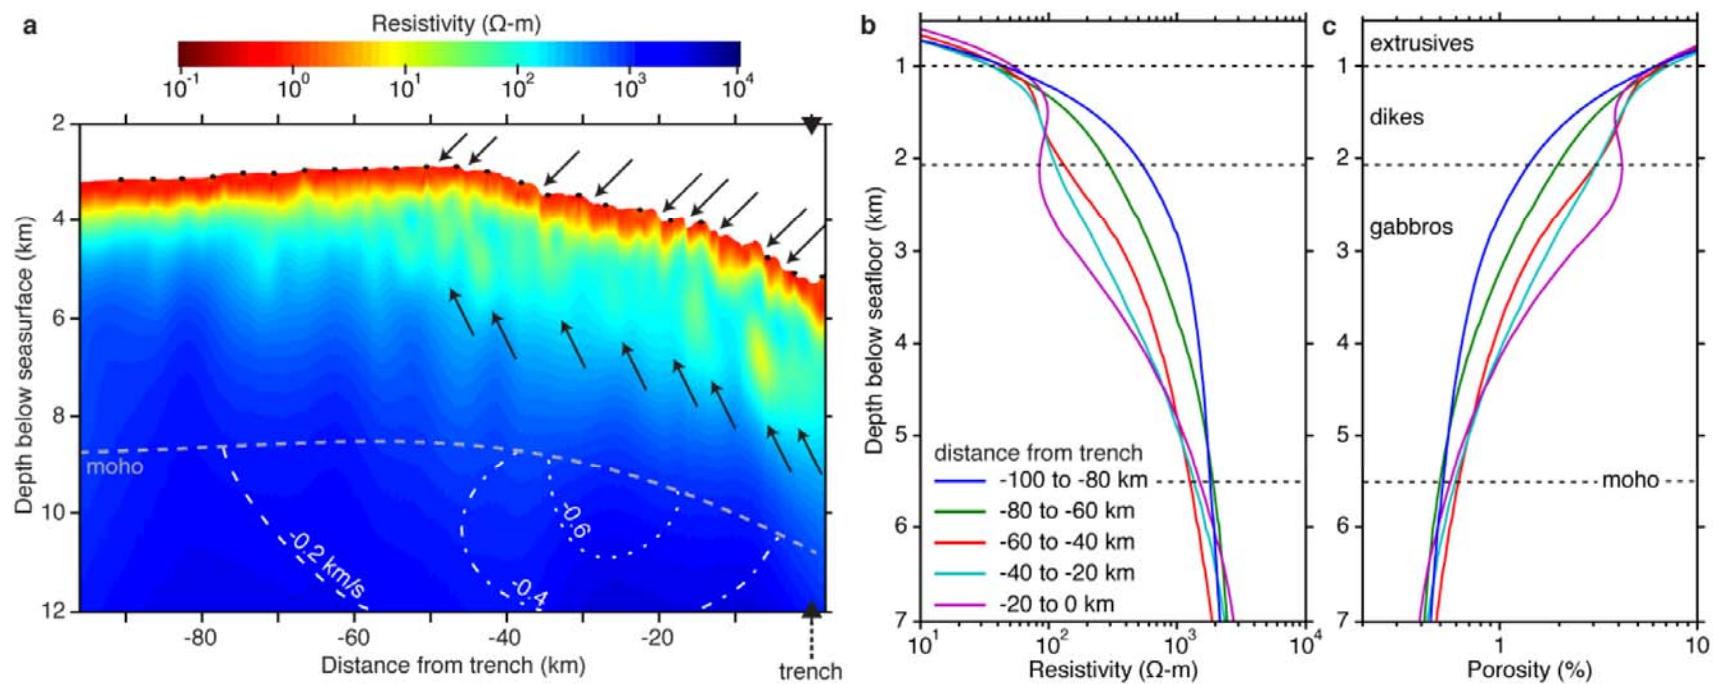

Seafloor morphology and fluids in the crust: Nicaragua

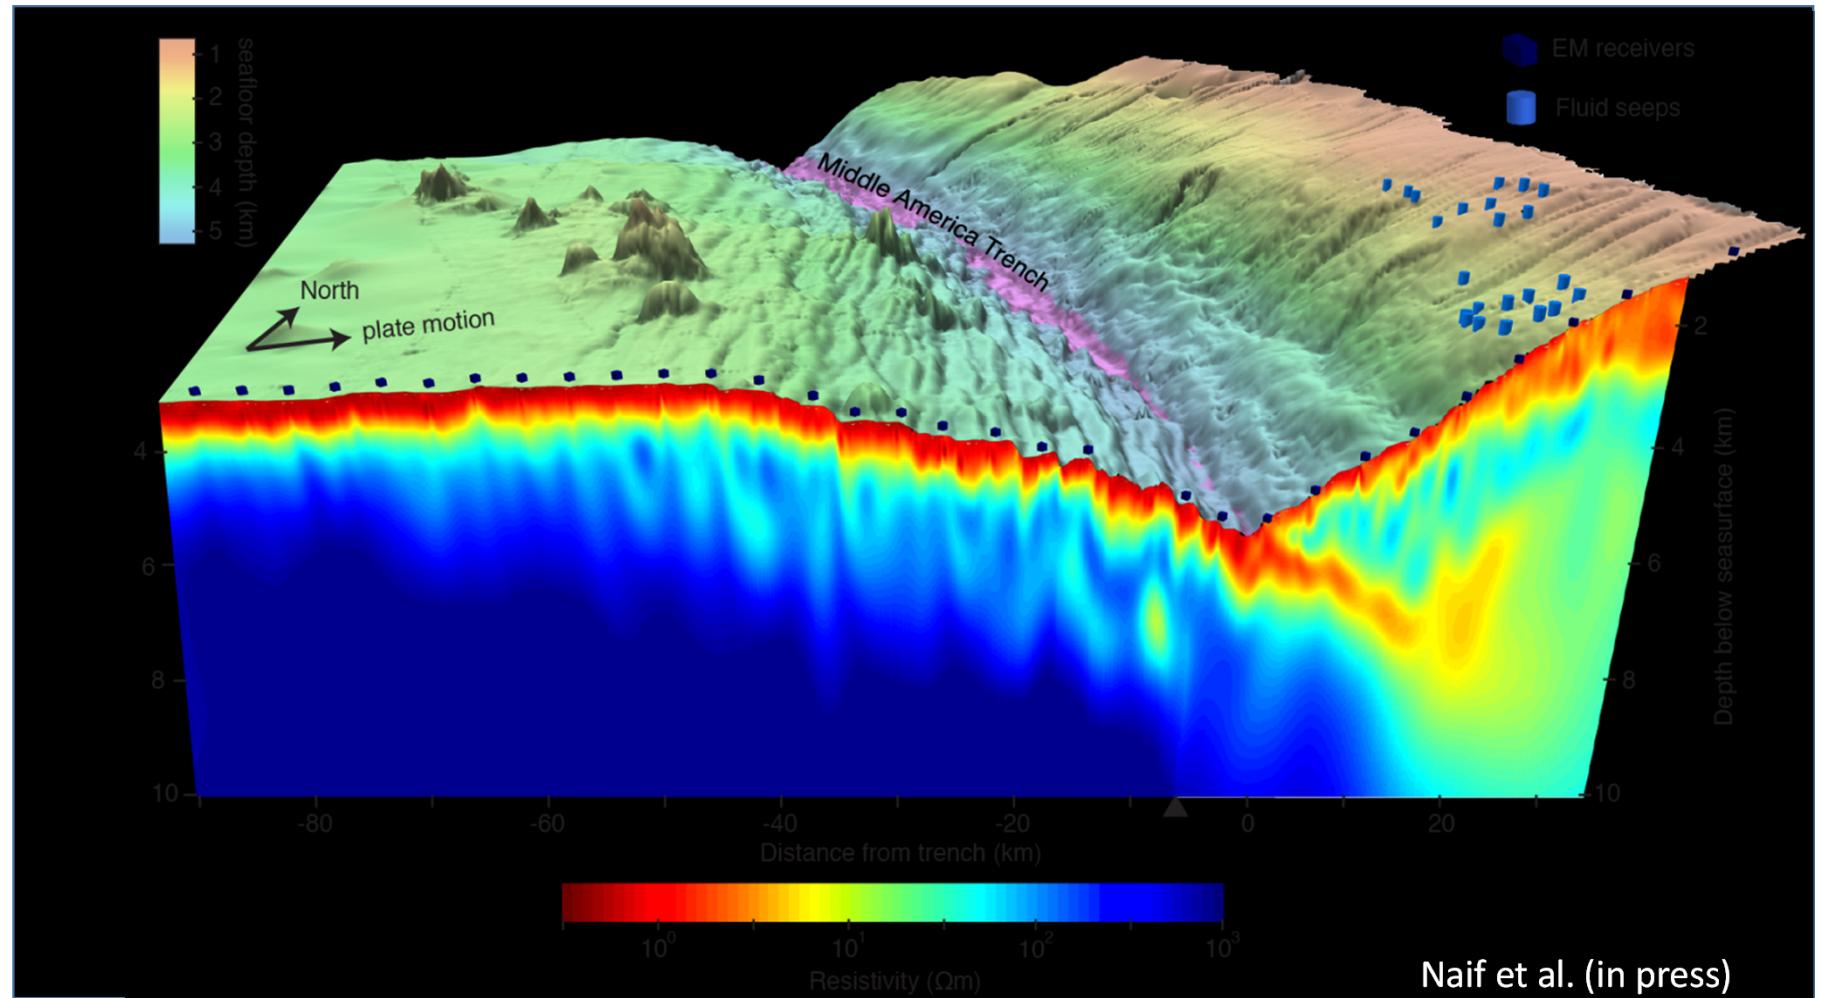

Key et al. (2012)

Resistivity images of fluid inputs

Naif et al. (2015)

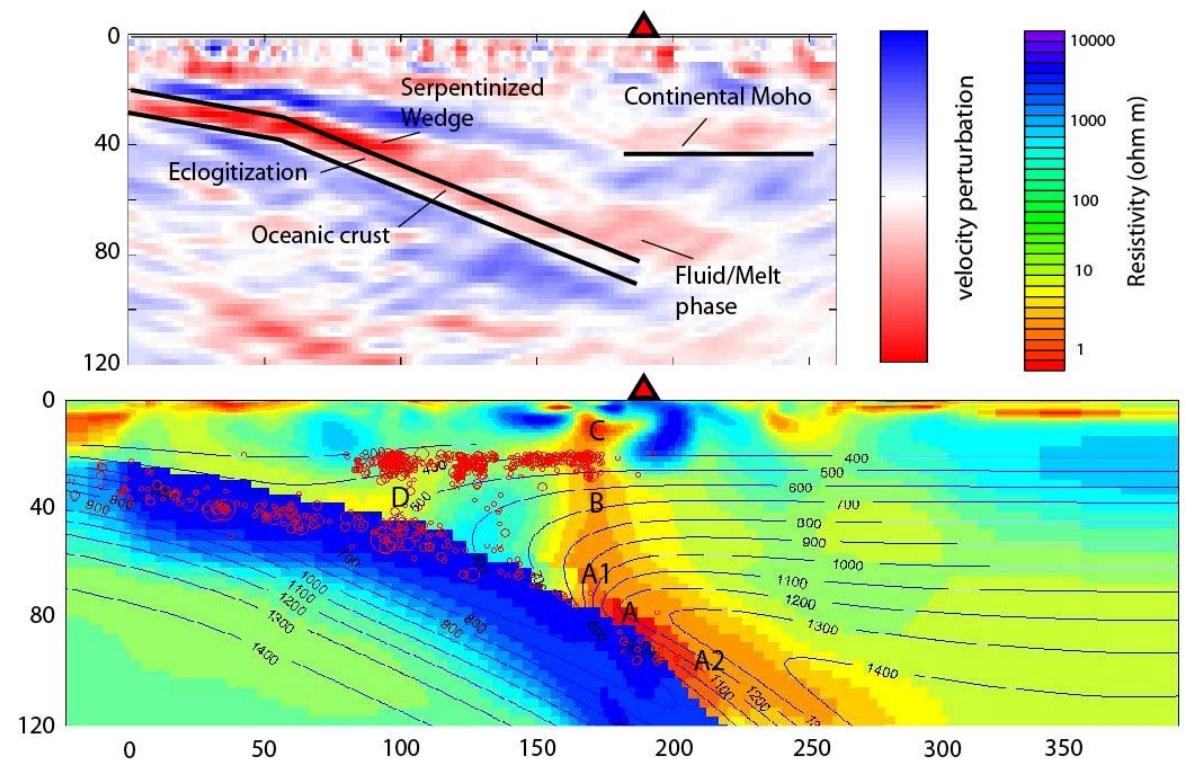

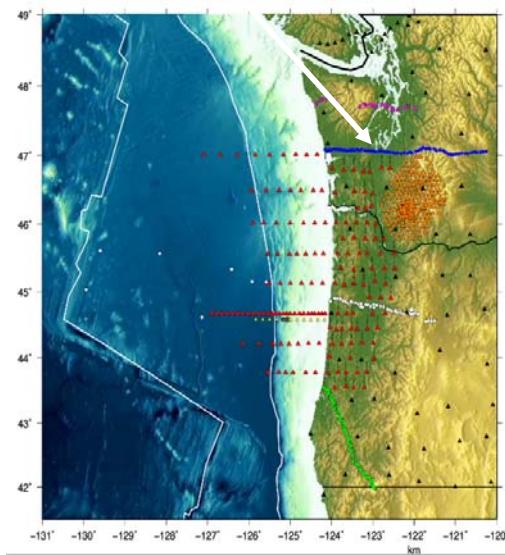

Shallow free fluid release

Naif et al. (in press)

Deeper fluid outputs: Using Magnetotellurics

Café Line, Washington State.

McGary et al., (2014)
